

## BMSB HEAT TREATMENTS

For your goods in transit to AUS & NZ

To prevent the Brown Marmorated Stink Bug (BMSB) from invading Australia and New Zealand, quarantine measurements are imposed on certain exported cargoes. These cargoes need to undergo treatment in the export country, before being allowed to be imported to Australia and New Zealand. Control Union is experienced in treating insects with heat in various modalities and is licensed to perform BMSB Heat Treatments under license NL4005SB.

We operate our own indoor Heat Treatment Terminal which is located within a 4PL warehouse close to the Rotterdam Port area (Amerweg, 3336 LA Zwijndrecht, Netherlands).

All cargoes are suitable for application of BMSB treatments, including 20ft and 40ft, OT, Out-of-Gauge or Flatrack, or LCL in our certified HT chamber. Containers or out-of-gauge and flatrack parcels are delivered on the trailer, which is uncoupled, and recoupled the next day for delivery to the export terminal. On request we can perform same day treatments as well.

### Key benefits of our operation;

- Flexible: Delivery day 1 < 15.00, Pick up day 2 > 08.00
- No Terminal Handling Charges, No Open Top surcharges
- Fixed out-of gauge and Flatrack rates
- LCL treatment available, 4PL services available

### Our rates;

We charge flat rates for 20', 40', Flatracks and Out of Gauge Containers. We are also specialized in mobile treatment of large objects on site. To know more about the specific cost of a treatment please request a proposal

- 4PL-, Value-added- and Custom- services on request
- Projects on request
